GENERAL INFORMATION

Introduction

Ball bushings are anti-friction bearings for linear motion. They offer the familiar advantages of ball bearings. e.g. Long service life, high precision and efficiency.

General Information

NB Ball Bushings are manufactured in Japan by Nippon Bearing Co. which is one of the largest Japanese Ball Bushing manufacturers. All of the shafts, rails and housings shown in this catalogue are manufactured in Germany. All parts are normally on short lead times (less than 7 days).

Construction and Materials

The outer ring of the ball bushing is made from hardened rolling bearing steel. The cylindrical ground and precision formed cage is made from one single part and is held in position by solid steel endplates. This design saves, in many applications, the use of sealed ball bushings. The special features of these extremely robust units are high rigidity, reliability and durability, especially during assembly.

Speed, Lubrication and Friction

The coefficient of friction μ of NB ball Bushings without seals is very low, approximately 0.001 to 0.003. Standard lubrication practices as applied to anti-friction bearings can be used for all ball bushings. Either oil or grease can be used as a lubricant but in most cases grease is preferable. If necessary NB ball bushings can be used without lubrication. Speeds of up to 2 m/s and accelerations of up to 60 m/s² are generally safe.

Mounting

When mounting a standard ball bushing into a housing an H7 fit for the housing bore is generally required. The ball bushing is secured in the housing by retaining rings, fixing screws or adhesive. To achieve pre-load the recommended tolerance for the housing bore can be, in certain cases, JS6 to M6.

Using our housings guarantees best fit and repeatability.

Life expectancy (Load capacity and calculation)

The size of the ball bushing is dictated by its load bearing capacity and its life expectancy. The nominal life span is calculated using this formula:

$$L = \left(\frac{C}{F} \right)^3 \cdot 10^5 m$$

where:
 C = Dynamic load capacity taken from the tables in this catalogue
 F = Dynamic equivalent load
 L = Travel in metres

For more precise calculations some other factors need to be included:

f_H = Shaft hardness (When using our shafts the factor is 1. For other shafts see table below)

f_T = factor for Temperature. An allowance must be made when operating at higher temperatures (i.e. >80° C) – see table below

f_L = factor for Life. See chart below if exceeding 10⁵m of travel

Therefore:

$$L = \left(\frac{C}{F} \cdot f_H \cdot f_T \cdot f_L \right)^3 \cdot 10^5 m$$

Factors		1	0.9	0.8	0.7	0.6	0.5	0.4	0.3	0.2	0.1
f_H	Hardness HRC	60	56	55	54	52	49	46	42	33	20
f_T	Temperature	80	100	125	160	200	on demand				
f_L	Travel life	1	1.3	2	3	5	8	15	35	120	1000

STANDARD BALL BUSHINGS

NB Ball Bushings are available as Closed Type NB0.- (with fixed working bore diameter) or Adjustable NB1.- (slotted) type ball bushings.

Cages:

These ball bushings are supplied with a steel cage as standard and held in position with solid steel end plates. Alternatively they can be supplied with a plastic cage using part number NB.0-3..

Seals:

Steel Cage, without seals. Ordering reference: NB.0-0..

Steel Cage, with two seals. Ordering reference: NB.2-0..

(where .. = shaft diameter)

eg. NB00-020 is unsealed with a steel cage; NB02-320 is sealed with a plastic cage

Closed type
NB0.-...

Slotted (adjustable) type
NB1.-...

Closed Type	Adjustable Type	d	D	B	b	s	Ball Circuits	Load C (N)	Load C ₀ (N)	Weight (kg)

NB00-008	NB1.-308	8	16	25	14	1	4	280	420	0.02
NB00-010	-	10	19	29	19	1	4	380	560	0.03
NB00-012	NB1.-012	12	22	32	20	1.5	4	570	800	0.04
NB00-016	NB1.-016	16	26	36	22	1.5	4	800	940	0.06
NB00-020	NB1.-020	20	32	45	28	2	5	900	1450	0.10
NB00-025	NB1.-025	25	40	58	40	2	6	1100	1700	0.24
NB00-030	NB1.-030	30	47	68	48	2	6	1700	3000	0.36
NB00-040	NB1.-040	40	62	80	56	3	6	2300	4700	0.77
NB00-050	NB1.-050	50	75	100	72	3	6	4100	8300	1.20
NB00-060	NB1.-060	60	90	125	95	3	6	4800	10200	2.30
NB00-080	NB1.-080	80	120	165	125	3	6	7500	16300	5.20

The load capacity listed in the above table is only valid if the direction of the load is acting directly on the ball race. If the direction of load is acting between two ball races the load rating is multiplied by the factor f.

For sizes 5,8,10,12 & 16, f = 1.41 for size 20 f = 1.46 and for sizes 25 to 80 f = 1.28

SPECIAL BALL BUSHINGS

Special Ball Bushings are identical in construction and materials to the standard ball bushings.

Some of these are dimensionally different to ISO 10285 and the European Standard.

PART (no seals)	PART (2 seals)	d	D	B	b	Ball Circuits	Load C (N)	Load C ₀ (N)	Weight (kg)

The load capacity in the above table is only valid if the direction of the load F is acting vertically. If the load is acting from another direction the load rating must be multiplied by the factor f taken from the diagrams below:

12 & 16 mm

20 mm

25 to 80 mm

STAINLESS STEEL BALL BUSHINGS

These stainless steel ball bushings have the same boundary dimensions & tolerances as the standard ball bushings (open & closed).

They are used where corrosion resistance is required for example in the food and chemical industries.

Technical specifications of the materials used:

Outer Ring & Balls 1.4125 (SUS440C)
 Steel Cage 1.4301 (SUS304)
 End Plates 1.4021 (SUS420)

ECO BALL BUSHINGS

These high quality ball bushings conform to ISO 10285.

They consist of outer ring and balls made from hardened and ground steel 100Cr6 and the cage is made from poly-acetal.

Integral rubber wiper seals are fitted as standard.

12 & 16 mm

20 mm

25 to 80 mm

SUPER BALL BUSHINGS

These ball bushings have the same boundary dimensions as the standard ball bushings and are usually interchangeable. The additional ball circuits enable higher load capacities.

Super ball bushings offer the advantage of being able to correct slight errors in alignment. The outer diameter varies along the length making them slightly barrel shaped. It is this shaping that enables it to self align.

The self alignment feature also means that there is no reduction in load capacity due to pressure between the bushing edge and the shaft. The ball tracks are ground and consequently the bushes run smoothly. Speeds of up to 3m/s are possible.

PART (2 seals)	d	D	B	b	Ball Circuits	Load C (N)	Load C ₀ (N)	Weight (kg)	Circlip Size
SK70-208	8	16	25	14.2	4	423	534	0.007	16x1

SK70-250	50	75	100	72	6	10800	13500	0.618	75x2.5

The load capacity listed in the above table is only valid if the direction of the load is acting directly on the ball race. If the direction of load is acting between two ball races the load rating is multiplied by the factor f.
For size 8 f = 1.41, for sizes 12 & 16 f = 1.46 and for sizes 20 to 40 f = 1.28.

OPEN SUPER BALL BUSHINGS

These ball bushings have the same boundary dimensions as the standard open ball bushings. They offer the same advantage of self alignment as the closed type Super Ball Bushings. An additional ball race in the larger ball bushings increases their carrying capacity slightly. The bushing is provided with a retention hole to secure it against displacement.

The load capacity shown in the table is only valid for load applied vertically. If the load is acting in any other direction, the load capacity must be taken from the diagrams shown below.

ROUND FLANGED BALL BUSHINGS

Flanged ball bushings are a useful means of mounting a ball bushing. The flange and outer ring are made from one billet of steel thereby giving enormous strength to the design. These single ball bushings with round flange are available with seals (FK12-) or without seals (FK10-).

For extra smooth running, these ball bushings are available with a plastic ball retainer. Ordering reference FK12-3..

Certain sizes are also available in stainless steel - enquire using part numbers formulated with a -5 as the first digit of the second group of numbers. For example FK10-520.

SQUARE FLANGED BALL BUSHINGS

These square flanged ball bushings are made to the European design and have the same characteristics and loadings as our popular range of round flanged ball bushings.

The flange provides a simple but robust mounting system. The ball bushing has 2 integral shaft wiping seals and a plastic cage.

TANDEM ROUND FLANGED BUSHES

The tandem round flanged ball bushings offer all the same benefits as the standard round flanged ball bushings but are longer and consequently have better load capacities.

They are available with seals (FK92-...) or without seals (FK90-...).

For all parts made from steel, the part number is FK90-0.. They are also available with two seals and a polyamide ball retainer - part number FK92-3.. (where .. is the shaft size).

Certain sizes are also available in stainless steel - enquire using part numbers formulated with a -5 as the first digit of the second group of numbers - for example FK90-520.

TANDEM SQUARE FLANGED BUSHES

These tandem (i.e. double length) square flanged ball bushings are made to the European sizes and have the same characteristics and loadings as our popular range of round flanged ball bushings.

The flange provides a simple but robust mounting system. The ball bushing has 2 integral shaft wiping seals and a polyamide ball retainer.

TANDEM CENTRE ROUND FLANGED BUSH

Tandem Centre Flanged Ball Bushings are specially designed for applications where the shaft is perpendicular to the supporting surface of the bush. The ball bushing can be bolted on through the flanged and therefore there is no need for a housing.

These ball bushings are available with two seals and a polyamide ball retainer, which is secured in the bush through solid end plates. Ordering reference number TF02-3..

The ordering reference number for the unsealed bushing is TF00-...

The Tandem Centre Flanged Ball Bushings are also available with all parts manufactured from steel (unsealed). Ordering reference number TF00-0..

If required they are available with all parts manufactured from stainless steel. Ordering reference number TF00-5..

EURO-BEARINGS LTD

SQUARE MID FLANGED TANDEM BUSHES

These tandem (i.e double length) square flanged ball bushings are made to the European dimensions and have the same characteristics and loadings as our popular range of round flanged ball bushings.

The flange provides a simple but robust mounting system. The ball bushing has 2 integral shaft wiping seals & a polyamide ball retainer.

The centre flange can be bolted to the bulkhead and therefore there is no need for a housing. The double length provides greater load capacity.

TRIPLE ROUND FLANGED BALL BUSHINGS

These triple flanged ball bushings are made with a grease nipple in the middle of the two recirculating ball areas for ease of lubrication.

The flange and outer ring are made from one billet of steel thereby giving enormous strength to the design. Also due to their length they offer higher rigidity than using multiple standard ball bearings.

They are available with two seals and a plastic ball retainer as shown below (FS92-3..).

For all components in stainless steel the ordering reference is FS90-5..

PART (2 seals)	d	D	L	b	A	E	F	S	Load C (N)	Load C ₀ (N)	Weight (kg)

TRIPLE CENTRE FLANGED BUSHES

This bushing is provided with a grease nipple in the centre of the bushing for ease of lubrication. It is longer than the TF type and therefore offers higher rigidity and accuracy.

The standard type has two seals and a plastic ball retainer. Part number: TS02-3..

If required the ball bushings are available with all parts manufactured from steel (unsealed). Ordering reference number: TS00-0..

REVERSE FLANGED BALL BUSHINGS

This ball bushing is an alternative version of the flanged ball bushings. The special four-bolt flange allows a reversed mounting, in which the shorter part of the bushing is inserted into the housing bore and the longer part is protruding.

The reversed-flange ball bushings are available with two seals and a plastic ball retainer as FK22-3.. (standard length) and as FK42-3.. (tandem length).

If required the ball bushing is available unsealed - part numbers FK20-3.. and FK40-3..

They are also available with all parts manufactured from steel. Ordering reference number FK22-0.. or FK42-0..

REVERSE ROUND FLANGED BALL BUSHES

These ball bushings are designed with a flange that allows the bush to be mounted against a bulkhead. This reverse mounting means that the shorter part of the bushing is inserted into the housing (or bulkhead) and the longer part is protruding.

The fixing holes are counterbored on the opposite side of the flange to the usual arrangement to allow for this specific type of fixing. In addition, they are easily re-lubricated via the nipple (see drawing below)

The standard type has 2 seals and a plastic cage.

Part number FK62-3..

It is also available with all parts in steel.

Part number FK60-0..

COMBINED LINEAR & RADIAL BUSHES

These rotating and sliding ball bushings allow both types of high precision motion. These motions can occur either separately or simultaneously. Given the same shaft size, the outside diameter of these ball bushings is much smaller than a combination of a standard ball bushing and a radial ball or roller bearing.

We now offer these bushes in two forms: 0662 Series with brass cage & RK series with circlip grooves in outer ring & steel cage.

0662 & RK00 do not have a flange, while RK20 has a square flange but no circlip grooves.

0662-...

RK20-0..

TANDEM BALL BUSHINGS

These ball bushings have the same boundary dimensions as the standard ball bushings but differ in their length.

This bushing offers the advantage of using just one double-length bush in place of two standard ball bushings.

Each tandem unit has two ball recirculating 'zones' thereby virtually doubling their load capacity and their accuracy for a given shaft size.

They are available with solid end plates & all components made from steel - reference TK00-0..

Or with two seals & a plastic ball retainer - reference TK02-3..

Alternatively all parts can be made from stainless steel with stainless steel endplates. Reference TK00-5..

NB. Load capacity is for vertical loads only.
