# TC

ROTARY INDEXING TABLES | TC ROTARY INDEXING TABLE

## TC ROTARY INDEXING TABLE: RELIABILITY FOR A LIFETIME

---

### EXTENDED WARRANTY

Using our rotary table control system minimises brake wear. This makes the rotary indexing table virtually maintenance-free throughout its entire service life. And using the indexer controller EF2 or EF3 also extends the warranty to five years.

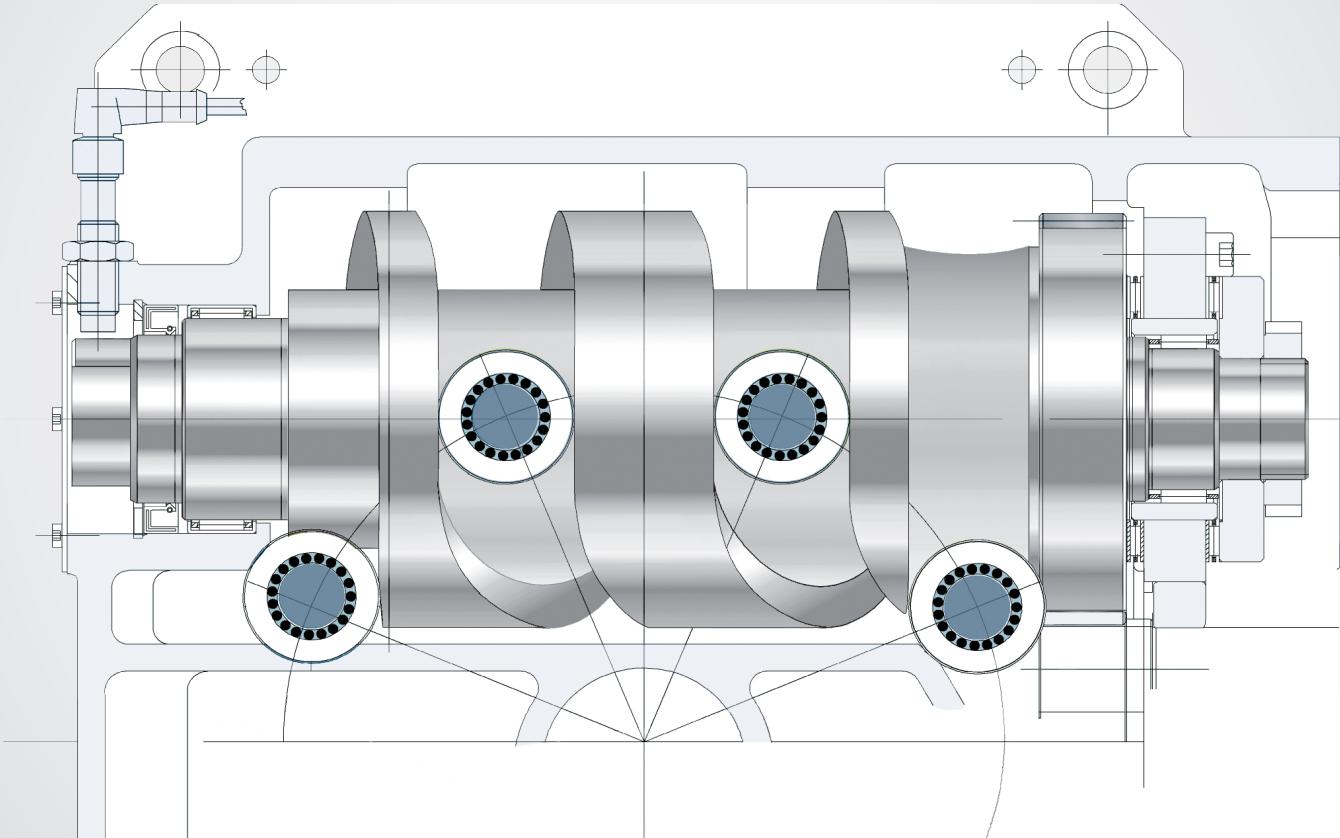

Customer machine for an automotive supplier. The assembly of sealing rings for injection pumps requires maximum precision. The TC120 rotary indexing table with matched rotating plate delivers this.

One of the most reliable, flexible and robust rotary tables available worldwide. Your most popular partner in the field of automation technology. Extremely long service life combined with impressively fast switching. Now in the fourth generation. Robust rotary indexing table with smooth, jerk and impact-free running and extremely long service life.

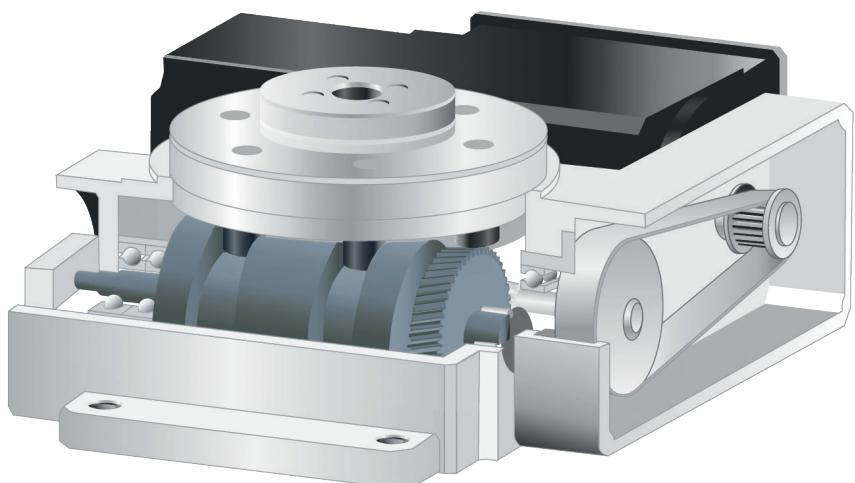

## ADVANTAGES

- Powerful upright centre part
- Large central bore and opening in the housing for media feed-through
- Precise, high-load bearing
- Protected by radial shaft seals with auxiliary lip
- Cam rollers mounted on needle bearings
- Grey iron housing
- Hardened plates
- Extremely high precision

The TC is one of the most reliable and robust rotary indexing tables worldwide. Our cam follower are dimensioned as large as possible. The full length of the cam is used.

Shortest switching times and an extremely high service life – we achieve this with high-precision drive cams made by our in-house manufacturing department.

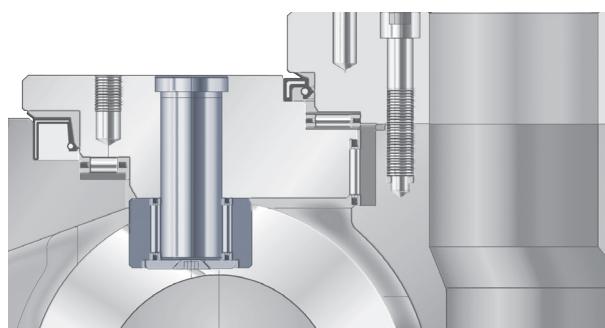

# DELIVERS WHAT IT PROMISES – THAT'S A PROMISE.

## GENERAL INFORMATION ON THE MODEL RANGE

- TC rotary indexing tables can be operated clockwise, counterclockwise and oscillating.
- The drive can be moved downward. You can perform the change by yourself.
- The TC rotary indexing tables are lubricated for life.
- The maximum switching frequency is up to 220 cycles per minute depending on size, system's mass moment of inertia and the angle of rotation.
- All TC rotary indexing tables are equipped with asynchronous brake motors. The size of the motors is optimally adapted to the respective rotary indexing table configuration so that the drive can never damage the rotary indexing table.
- The specified maximum load data for radial force and torque of the stationary centre part and the output flange refer only to the rotary indexing table.
- To determine the exact maximum load of the complete system, the influence of the plate material and the fastening of the plates has to be considered, too.
- We are available to support you with the dimensioning of the complete system.
- Information concerning indexing times (TC120 - TC500): The measured indexing time (from start signal to electrical position signal) is calculated from the indexing time given in the tables and the type-dependent loss times. Important impact has the electrical signal processing time and the setting and optimization of the ideal start position.

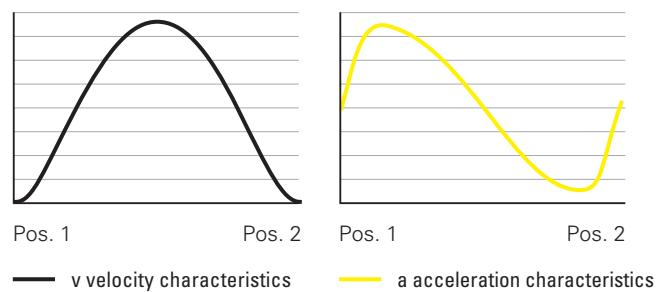

## OPTIMIZED BEARINGS

To achieve maximum quality and reliability even under load, all roller bearings are running in an oil bath and the cam followers are mounted on needle bearings.

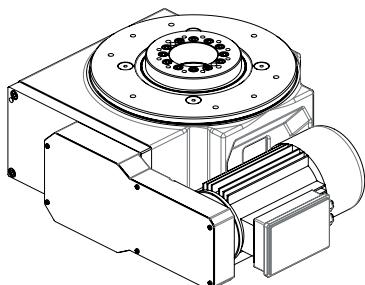

## GENTLE MOVEMENTS

Via a geometrically optimized motion profile a smooth, harmonic indexing movement is achieved. Resulting in longest lifetime for shortest indexing times.

**OPTIONS**

- If necessary, the stationary centre part can be raised 5mm or 10mm.
- All TC sizes can optionally be equipped with a DRIVE-CLiQ absolute encoder.
- The rotary encoder in combination with the EF2 rotary table control system offers the following options:
  - » Cam mechanism: 16 virtual cam switches can be placed anywhere on the circumference of the rotation plate via the control system. The resulting signals can be used to start processes in advance and optimize the overall process. The overall cycle time can be optimized by shortening latency times.
  - » Segment detection: The index of the current nest is reflected in the locking position on the fieldbus or to digital I/Os if necessary. This eliminates the need for retrofit equipment to determine the current position of the component nests on the rotating plate.
- Standard colour: RAL7035 (other colours available on request)
- Please get in touch with us if you are looking for a solution for cleanroom applications.
- Reinforced bearings are available on request.

# TC 120G

## GENERAL INFORMATION

- Max. recommended diameter of the external dial plate  $D_{tp}$ : approximately 660 mm (with consulting from WEISS larger diameters are possible)

## TECHNICAL DATA

<b>U</b>	Voltage (custom voltages available on request):	230 / 400 V
<b>f</b>	Frequency:	50 Hz
	Indexing precision *:	Indexing 2-10: 90 arcsec ( $\pm 45''$ ) Indexing 12-20: 110 arcsec ( $\pm 55''$ )
<b>A<sub>r</sub></b>	Axial run-out of the drive flange:	(at Ø 120 mm) 0.02 mm
<b>C<sub>r</sub></b>	Radial run-out of the output flange:	0.02 mm
<b>m</b>	Total weight, including motor:	22 kg

## LOAD DATA (for the stationary central part)

Due to the necessary layout of the drilling pattern, the stationary central section should only be used for attaching sensor technology or similar small components.

Combined loads and permitted process forces only after inspection by WEISS.

## LOAD DATA (for the output flange)

<b>T<sub>2 stat</sub></b>	Static torque:	120 Nm
<b>M<sub>2T dyn</sub></b>	Permitted dynamic tilting moment:	200 Nm
<b>F<sub>2A dyn</sub></b>	Permitted dynamic axial force:	3300 N
<b>F<sub>2R dyn</sub></b>	Permitted dynamic radial force:	1500 N

\* Positioning accuracy can be improved by 10 arcsec on request.

## LOAD TABLE 50 Hz (on request: higher loads / custom indexing and switching times for 60 hz mains frequency)

**J<sub>2 Max</sub>** = max admissible mass inertia loading (kgm<sup>2</sup>) t<sub>i</sub> = cycle time (sec.) Depending on motor size, electronics and time optimisation settings, the cycle time measured from the start signal to the electric position indication is approx. 80 - 130 ms longer than the value specified in the table.

\*EF2 or EF3 - Control recommended to minimise brake wear

## DIMENSIONS

If you require subsequent drilling work on the indexing table, please request information on permissible drilling depths. The illustrated rotating plate position corresponds to the basic position of the rotary indexing table (Position when delivered).

\* Dimensions at speed levels: h,i,j

Max. Twist tolerance between the standing middle section and the turntable: ± 180"

Max. Twist tolerance between turntable and table housing: ±120"

**Note:** Keep the motor and brake accessible for service!

**Attention:** When the rotary table is recessed in the base plate,  
the pocket must be 15 mm larger than the outer contour of the table.

# TC 150T

## GENERAL INFORMATION

- Max. recommended diameter of the external dial plate  $D_{tp}$ : approximately 880 mm (with consulting from WEISS larger diameters are possible)

## TECHNICAL DATA

<b>U</b>	Voltage (custom voltages available on request):	230 / 400 V
<b>f</b>	Frequency:	50 Hz

**J<sub>2 Max</sub>** = max admissible mass inertia loading (kgm<sup>2</sup>) t<sub>i</sub> = cycle time (sec.) Depending on motor size, electronics and time optimisation settings, the cycle time measured from the start signal to the electric position indication is approx. 80 - 130 ms longer than the value specified in the table.

**\*EF2 or EF3** - Control recommended to minimise brake wear  
The values in the second table apply for the maximum permitted mass moment of inertia when using the size 71 motor.

## DIMENSIONS

If you require subsequent drilling work on the indexing table, please request information on permissible drilling depths. The illustrated rotating plate position corresponds to the basic position of the rotary indexing table (Position when delivered).

\* Dimensions for motor BG71

\*\* Dimensions at speed levels: h,i,j

Max. Twist tolerance between the standing middle section and the turntable: ± 150"

Max. Twist tolerance between turntable and table housing: ± 100"

**Note:** Keep the motor and brake accessible for service!

**Attention:** When the rotary table is recessed in the base plate,

the pocket must be 15 mm larger than the outer contour of the table.

# TC 320T

## GENERAL INFORMATION

- Max. recommended diameter of the external dial plate  $D_{tp}$ : approximately 1550 mm (with consulting from WEISS larger diameters are possible)

## TECHNICAL DATA

<b>U</b>	Voltage (custom voltages available on request):	230 / 400 V
<b>f</b>	Frequency:	50 Hz
	Indexing precision*:	Indexing 2-12: 40 arcsec ( $\pm 20''$ ) Indexing 16-24: 60 arcsec ( $\pm 30''$ ) Indexing 30-36: 70 arcsec ( $\pm 35''$ )
<b>A<sub>r</sub></b>	Axial run-out of the drive flange:	(at Ø 320 mm) 0.01 mm
<b>C<sub>r</sub></b>	Radial run-out of the output flange:	0.01 mm
<b>m</b>	Total weight, including motor:	112 kg
<b>D<sub>i</sub></b>	Min. inside diameter of the rotary plate:	150 mm

## LOAD DATA (for the stationary central part)

<b>T<sub>SP</sub></b>	Permitted torque:	800 Nm
<b>M<sub>TSP</sub></b>	Permitted tilting moment:	1800 Nm
<b>F<sub>ASP</sub></b>	Permitted axial force:	18000 N
<b>F<sub>RSP</sub></b>	Permitted radial force:	10000 N

Combined loads and permitted process forces only after inspection by WEISS.

## LOAD DATA (for the output flange)

<b>T<sub>2stat</sub></b>	Static torque:	600 Nm
<b>M<sub>2Tdyn</sub></b>	Permitted dynamic tilting moment:	2250 Nm
<b>F<sub>2Adyn</sub></b>	Permitted dynamic axial force:	15000 N
<b>F<sub>2Rdyn</sub></b>	Permitted dynamic radial force:	13000 N

\* Positioning accuracy can be improved by 10 arcsec on request.

## LOAD TABLE 50 Hz (on request: higher loads / custom indexing and switching times for 60 hz mains frequency)

**J<sub>2 Max</sub>** = max admissible mass inertia loading (kgm<sup>2</sup>) t<sub>i</sub> = cycle time (sec.) Depending on motor size, electronics and time optimisation settings, the cycle time measured from the start signal to the electric position indication is approx. 80 - 130 ms longer than the value specified in the table.

\*EF2 or EF3 - Control recommended to minimise brake wear.

## DIMENSIONS

If you require subsequent drilling work on the indexing table, please request information on permissible drilling depths. The illustrated rotating plate position corresponds to the basic position of the rotary indexing table (Position when delivered).

TC500T

\* Dimensions for motor BG90

\*\* Dimensions at speed levels: o, p ,q (2-stage)

Max. centre line deviation between stationary centre section and dial:  $\pm 75''$

Max. centre line deviation between dial and indexer housing:  $\pm 55''$

**Note:** Please ensure motor and brake accessible for serving!

**Attention:** When the rotary table is recessed in the base plate.

When the rotary table is recessed in the base plate,  
the pocket must be 15 mm larger than the outer contour of the table.

# TC 700T

## GENERAL INFORMATION

- Max. recommended diameter of the external dial plate  $D_{tp}$ : approximately 3300 mm (with consulting from WEISS larger diameters are possible)

## TECHNICAL DATA

<b>U</b>	Voltage (custom voltages available on request):	230 / 400 V
<b>f</b>	Frequency:	50 Hz
	Indexing precision*:	Indexing 2-12: 24 arcsec ( $\pm 12''$ ) Indexing 16-60: 32 arcsec ( $\pm 16''$ )
<b>A<sub>r</sub></b>	Axial run-out of the drive flange:	(at Ø 700 mm) 0.02 mm
<b>C<sub>r</sub></b>	Radial run-out of the output flange:	0.02 mm
<b>m</b>	Total weight, including motor:	660 kg
<b>D<sub>i</sub></b>	Min. inside diameter of the rotary plate:	242 mm

## LOAD DATA (for the stationary central part)

<b>T<sub>SP</sub></b>	Permitted torque:	1000 Nm
<b>M<sub>TSP</sub></b>	Permitted tilting moment:	3000 Nm
<b>F<sub>A SP</sub></b>	Permitted axial force:	30000 N
<b>F<sub>R SP</sub></b>	Permitted radial force:	15000 N

Combined loads and permitted process forces only after inspection by WEISS.

## LOAD DATA (for the output flange)

<b>T<sub>2 stat</sub></b>	Static torque:	1400 Nm
<b>M<sub>2T dyn</sub></b>	Permitted dynamic tilting moment:	10000 Nm
<b>F<sub>2A dyn</sub></b>	Permitted dynamic axial force:	40000 N
<b>F<sub>2R dyn</sub></b>	Permitted dynamic radial force:	27000 N

\* Positioning accuracy can be improved by 10 arcsec on request.

## LOAD TABLE 50 Hz (on request: higher loads / custom indexing and switching times for 60 hz mains frequency)
